SKILLS

Frontend: React, Next.js, Redux Toolkit, HTML, CSS, Sass, Tailwind CSS, shadcn/ui, responsive design

Languages: JavaScript (ES6), TypeScript, SQL, Python, C++

Backend: Node.js, Express.js, REST APIs, PostgreSQL, Prisma

Fundamentals & tools: Data Structures & Algorithms, OOP, Git, GitHub, Agile, code review, component libraries

EXPERIENCE

Software Engineer Intern (Frontend)

Jun 2025 – Jun 2026

KoinX

Remote

- Shipped 11 production features across 7 repositories in a fast-moving startup codebase, working primarily in React/TypeScript/Next.js and navigating an unfamiliar large-scale codebase by tracing existing patterns before extending them.
- Designed reusable components (OTP input, chart suite, filter display) for the org's shared design system, consumed across multiple product surfaces – requiring backward-compatible APIs as the components scaled beyond their original use case.
- Contributed 19 PRs to xui, the org's shared component library consumed by three products – charting suite, OTP input, virtualized-select refactor, and a precision-loss warning on financial amount display.
- Drove frontend performance work in the final phase – bundle-size reduction, component memoization, and a dependency audit removing unused packages.

Full Stack Developer

Dec 2024 – Feb 2025

Pixels and Grids

Remote

- Delivered UI/UX features across 4 client projects, including conditional discount logic in an admin pricing panel, responsive navigation/search fixes, and reusable CMS-driven public pages.
- Built a dynamic seller dashboard shell with a sidebar reflecting live route/user state and a reusable page header component, used across the seller-side experience.

PROJECTS

Cryptax – crypto-tax web app (React front end on a Node.js API)

Live | Code

- Built the Next.js 16 App Router dashboard in React 19 – route-group layouts, TanStack React Query for all server state, shadcn/Tailwind components and light/dark theming.
- Wrote an Axios interceptor that collapses concurrent 401s into a single in-flight token refresh and replays the queued requests, so an expiring session never interrupts the user.
- Built the Node.js/Express.js API behind it in TypeScript, around a pure-function FIFO tax engine covered by 27 Vitest unit tests.

Blood Link – location-aware blood-donation platform

Live | Code

- Built donor camp discovery in React 19 – browser geolocation, debounced search and filters, distance-ranked cards, skeleton loading states and load-more pagination, with MapLibre and Leaflet map views.
- Developed a responsive, themeable interface across 27 pages and three user roles on Next.js 15 with Tailwind and shadcn/Radix primitives.
- Wrote the PL/pgSQL PostGIS stored procedures the search runs on, ranking results by distance with filtering and pagination handled in SQL.

EDUCATION

B.Tech, Computer Science – CGPA 8.6/10

2022 – 2026

I.K. Gujral Punjab Technical University

Punjab, India

Certifications: JavaScript Algorithms & Data Structures (freeCodeCamp); Node.js, Express.js & SQL (Scrimba); Google Cloud Foundations (Google Cloud); Full Stack Web Development, Grade S (NIELIT, 2024)
