Bengaluru, India | +91 7717484812 | gautam.anand.ptu@gmail.com | github.com/Agent-Gautam |
linkedin.com/in/gautam-anand-ptu

SKILLS

Languages: JavaScript (ES6), TypeScript, SQL, Python, C++

Backend: Node.js, Express.js, REST APIs, Prisma, PostgreSQL, MongoDB, Authentication (JWT)

Frontend: React.js, Next.js, Redux, Tailwind CSS, shadcn/ui, HTML5, CSS, Sass

Applied AI: Large Language Models (LLMs), API-based LLM integration (Google Gemini), Vercel AI SDK, tool calling

Fundamentals & tools: Data Structures & Algorithms, OOP, API design, Git, GitHub, Agile, code review

EXPERIENCE

Software Engineer Intern (Frontend)

Jun 2025 – Jun 2026

KoinX

Remote

- Shipped 11 production features across 7 repositories in a fast-moving startup codebase, working primarily in React/TypeScript/Next.js and navigating an unfamiliar large-scale codebase by tracing existing patterns before extending them.
- Built AI-powered transaction search with natural-language filtering and recent-search history, plus the applied-filters display layer that made complex filter state legible to users.
- Drove frontend performance work in the final phase – bundle-size reduction, component memoization, and a dependency audit removing unused packages.

Full Stack Developer

Dec 2024 – Feb 2025

Pixels and Grids

Remote

- Built full-stack seller and buyer modules for a multi-vendor e-commerce platform (KollaBee), including product CRUD with multi-image uploads (cover, thumbnail, detail) to Supabase, dynamic order/analytics dashboards, and an integrated Razorpay checkout flow.
- Implemented the database and authentication layer for a SaaS platform (Conceevo) using Prisma ORM, and shipped a bulk HTML email marketing feature that targeted users opted into platform updates.

PROJECTS

Cryptax – crypto-tax web app with an LLM assistant grounded on real data

Live | Code

- Integrated Google Gemini through the Vercel AI SDK as a streaming assistant that runs an agentic tool-calling loop over 8 whitelisted, database-backed tools; prompt guardrails stop the model computing figures itself, so every number it reports is traceable.
- Built the Node.js/Express.js backend in TypeScript around a pure-function FIFO tax engine (30% VDA tax, 1% TDS, Indian financial-year bucketing) covered by 27 Vitest unit tests.
- Implemented auth end to end: OTP-verified registration, JWT access tokens with rotating hashed refresh tokens, and per-device session revocation across an 8-table Prisma/PostgreSQL schema.

Blood Link – location-aware blood-donation platform (Next.js + PostGIS)

Live | Code

- Wrote PL/pgSQL PostGIS stored procedures for distance-ranked geospatial search, one with an in-SQL dynamic ORDER BY, search, organisation filtering and keyset pagination.
- Built the three-sided app (donor / hospital / admin) on Next.js 15, React 19 and Supabase PostgreSQL, with geolocation camp discovery, MapLibre maps and emergency requests fanned out to nearby organisations that actually hold the stock.

Faculty Feedback – multi-tenant college feedback platform

Live | Code

- Re-platformed a single-tenant JavaScript/MongoDB prototype into a multi-tenant TypeScript/Next.js 16 app on PostgreSQL and Prisma 7, with five role-based portals and server-computed analytics.
- Wrote a transactional feedback-submission action (ownership check, rating validation, delete-create-status flip inside one transaction) and bulk entry generation de-duplicated on composite keys, so both are safe to re-run.

EDUCATION

B.Tech, Computer Science – CGPA 8.6/10

2022 – 2026

I.K. Gujral Punjab Technical University

Punjab, India

Certifications: Google Cloud Foundations (Google Cloud); JavaScript Algorithms & Data Structures (freeCodeCamp); Node.js, Express.js & SQL (Scrimba); Full Stack Web Development, Grade S (NIELIT, 2024)
