SKILLS

Languages: Python, TypeScript, JavaScript (ES6), C++, SQL

Frontend: React, Next.js, Redux, Tailwind CSS, shadcn/ui

Backend: Node.js, Express, RESTful APIs, PostgreSQL, Prisma

AI & Data: LLM integration (Vercel AI SDK, Gemini), tool-calling agents, streaming data pipelines / ETL

Tools & Practices: Git, GitHub, Vitest, Agile/Scrum, Code Review

EXPERIENCE

Software Engineer Intern (Frontend), KoinX

Jun 2025 – Jun 2026

Crypto tax & accounting platform

Remote

- Shipped 11 production features across 7 repositories in a fast-moving startup codebase, working primarily in React/TypeScript/Next.js and navigating an unfamiliar large-scale codebase by tracing existing patterns before extending them.
- Built AI-powered transaction search with natural-language filtering and recent-search history, plus the applied-filters display layer that made complex filter state legible to users.
- Owned the transaction-categorization and internal-transfer surface of KoinX's accounting platform across ~12 shipped changes – categorization flows, uncategorize/re-recognize actions, workspace-level transfer settings (React, TypeScript, Redux Toolkit).

Full Stack Developer, Pixels and Grids

Dec 2024 – Feb 2025

Software development studio

Remote

- Built full-stack seller and buyer modules for a multi-vendor e-commerce platform (KollaBee), including product CRUD with multi-image uploads (cover, thumbnail, detail) to Supabase, dynamic order/analytics dashboards, and an integrated Razorpay checkout flow.
- Implemented the database and authentication layer for a SaaS platform (Concevo) using Prisma ORM, and shipped a bulk HTML email marketing feature that targeted users opted into platform updates.

PROJECTS

CryptoTax Buddy – full-stack crypto-tax platform with a grounded AI assistant

github.com/Agent-Gautam

- Solo-built a full-stack web app (Next.js 16 / React 19 frontend, Express 5 / TypeScript / PostgreSQL backend) with a versioned REST API, JWT auth, an 8-table Prisma schema, and 38 Vitest unit tests; deployed on Railway.
- Built a streaming data-ingestion pipeline (Busboy, csv-parser) that ingests, parses, and normalizes uploaded records with manual backpressure and batched, transactionally rolled-back inserts – handling files up to 1 GB without loading them into memory.
- Integrated a large language model (Vercel AI SDK, Google Gemini) as an agentic assistant over 8 whitelisted, database-backed tools, with prompt-level guardrails that stop the model from computing or hallucinating any figure.

Faculty Feedback Platform – multi-tenant analytics app with five role-based portals

github.com/Agent-Gautam

- Built a multi-tenant faculty-feedback platform (Next.js 16 App Router, React 19, TypeScript, PostgreSQL, Prisma 7) with five role-based portals, a 14-model relational schema, and server-computed analytics dashboards.
- Wrote a transactional feedback-submission server action (ownership check, rating validation, atomic delete-create-status update) plus bulk generation with set-based de-duplication.

EDUCATION

B.Tech, Computer Science

2022 – 2026

I.K. Gujral Punjab Technical University

Punjab, India | CGPA 8.6/10

Full Stack Web Development Training – Grade S

2024

NIELIT

India
